

# Cisco Certified Internetwork Expert (Wireless)

---

## Course Details

**Course #** CCIEW  
**Vendor** Cisco Systems

## Prerequisites

Advanced CCNA or standard CCNP routing and switching knowledge level is highly recommended (knowledge of VLANs, switch management and ipv4 / ipv6 routing, and QoS).

Advanced CCNP Wireless or similar work experience is recommended.

NOTE: Students can not attend the practical without first completing the CCIEW v3.1 written exam.

We also recommended that you have a good knowledge of:

- Wireless standards (IEEE)
- Wireless regulator environment (FCC, ETSI, etc.)
- Wireless certification organization (WiFi alliance)
- Cisco Autonomous APs configuration and Management
- Cisco Unified Access configuration and Management

## Who should attend

- Anyone looking to become a CCIE Wireless
- Network Engineers

- Systems Engineers
- Consulting Engineers
- Wireless Network Administrators

## Course Description

**Summary** This is the only authorized Cisco CCIE Wireless Bootcamp in the market, Cisco Learning Credits are accepted. This five-day, instructor-led boot camp is the best way for you to prepare for the CCIE Wireless Lab exam. This course will give you the information and practice activities to best prepare you to pass the CCIE Wireless 8-hour lab exam. This intensive boot camp begins immediately with expert assisted hands-on lab exercises and continues throughout the week to build core competency and speed in the lab.

This five-day, instructor-led boot camp is the best way for you to prepare for the CCIE Wireless Lab exam. This course will give you the information and practice activities to best prepare you to pass the CCIE Wireless 8-hour lab exam. This intensive boot camp begins immediately with expert assisted hands-on lab exercises and continues throughout the week to build core competency and speed in the lab. The course culminates on day 5 with a full 8-hour graded MOC lab where you put your skills to the test and verify readiness before the real lab. You will be assigned to your own pod with the gear and code required for the CCIE Wireless program. This course is very hands-on offering expert guidance, mentorship, with extended exercises and lab scenarios to develop your skills, build confidence and speed. The hardware and software used in this course is based on the CCIEW v3.1 lab requirements from Cisco.

This boot camp is an extremely accelerated program to prepare you to take the CCIE Wireless lab and requires total dedication during the course be most effective in preparing you. Wireless is a high-growth segment for Cisco thanks to mega trends like BYOD, Secure Guest Access, and IoT/loE. The demand is higher than ever for expert level wireless engineers, and this program is the best way to gain the expert level configuration and troubleshooting skills required to earn the coveted CCIE title specializing in Wireless.
