

Rockstar Meraki Networking

Course Details

Course # RSM
Vendor WiFi Training

Prerequisites

Course Description

Summary The Cloud Network Professional training from WiFi Training & Ingram Micro is an all original course designed to ready engineers to design and deploy cloud managed network infrastructure focusing on the Cisco/Meraki product lines. The class takes a “Mentored Consulting” approach and designed to prepare engineers to handle greenfield and brownfield deployments of Cisco/Meraki products and services. We cover everything from initial setup, to integrating Meraki cloud technologies with other Enterprise products from Cisco mimicking many real-world Enterprise environments. In this class, students will learn to design and deploy Cisco/Meraki technologies to meet an SMB/Enterprise design requirement. Learn the fundamentals of WiFi Design to ensure coverage and capacity requirements are achieved even for higher density deployments. Students will learn to deploy enterprise security and AAA services securely via the Meraki Cloud portal, as well as integrate with Cisco premise based AAA services with Cisco Identity Services Engine. Students will learn to deploy secure enterprise branch office technology, with Meraki Firewalls, Meraki Switching, and Meraki Firewalls with advanced security features. This course is 50/50 lecture lab, and labs are designed to give each student the practice needed to handle enterprise day 2 deployments, and greenfield enterprise branch deployments.
